Report of Funded and Unfunded Projects

2015 - Present - Research Principal Investigator

ROSE Study (Research OutSmarts Endometriosis), Feinstein Institute for Medical Research New York, NY

Funding source: Northwell Ventures, Northwell Health and the Endometriosis Foundation of America

Aim: The major goals of the ROSE study are to collect large-scale real data on endometriosis patients, combining data from menstrual effluent collection and patient history/pathology findings from surgery to ultimately aid in non-invasive diagnosis of endometriosis. The ROSE study has access to using the pathology tissue bank of endometriosis specimens that contains 27,000 specimens and counting from the prior 10 years of my surgeries.

2014-Present - Research Principal Investigator

Topography of Endometriosis Lesions, Seckin Endometriosis Center, and Lenox Hill Hospital Funding source: unfunded
Aim: This database project aims to collect very specific data points on endometriosis patients regarding symptoms before and after surgery, and with a specialized software that allows us to input exactly where specimens were excised during surgery, we then correlate the positivity of endometriosis lesions with particular symptoms. This database is ongoing and at least 100 specimen entries are made per week.

Report of Technological and Other Scientific Innovations

Issued Patents:

- [Laparoscopic Surgery Method and Laparoscopic Surgery Solution \(Blue Water/Methylene Blue\)](#)
Patent No. US10493171. Issued: December 03, 2019.
The instillation and hydrodistention of peritoneum with diluted methylene-blue in a specific concentration provides clearer visualization and identification of endometriosis due to elimination of the red-light spectrum and facilitates excision of endometriosis lesions. Used locally by Dr. Seckin's teams at Lenox Hill Hospital and his trainees globally.
- [Surgical Endobag and Method of Application Thereof](#)
Patent No. US9345459 (European Patent EP2598039). Issued: May 24, 2016.
Endobag is a unique intrasurgical bag that is configured to be fixed to the inner parts of the body and does not necessitate being supported and carried by its own structures. The bag may be laid in the inside of the body around the operating region and fixed so that any spill to the surroundings is prevented, and makes use of the body itself for forming a bag shape, matching the surroundings so that a tight seal is formed between the bag and the body. Not yet commercially available.
- [Surgical Method and Apparatus \(Uterus Manipulator in Barrel\)](#)
Patent No. US9566050 (European Patent EP2598018). Issued: February 14, 2017.
This unique uterine manipulator has the feature and functionality that the uterus may be manipulated by the rotating part while another connected tool is guided in parallel by the channel (the Endobag). Such a configuration enables the surgeon to work at different regions on an exact flat line with both tools. Not yet commercially available.
- [Method of Surgical Treatment of Ovary](#)
Patent No. US18152788. Issued: January 11, 2023.
The present invention provides a method for surgical treatment of an ovary, wherein an incision is formed in an external wall of the ovary such that a supply path extends from the incision into the ovary, and wherein an insert is provided, and a distal portion of the insert is inserted through the incision, such that a proximal portion of the insert is arranged outside of the ovary to supply the ovary externally.

Issued US Trademarks:

- Trademark Serial No. 86826741
Trademark: Aqua Blue Excision Technique ABCt Issued on Jul. 26, 2016
Renewal due July 26, 2021
- Trademark Serial No. 86415386
Trademark: Seckin Aqua Blue Excision Technique SABE Issued on Dec. 15, 2015
Renewal due Dec. 15, 2020
